

Bellcourt Review Copilot: architecture

Components, data flow, where PACE, fax and the portal plug in, and where the human decides

BELLCOURT SYSTEMS (READ-ONLY). PACE STAYS THE SYSTEM OF RECORD.

Question	Answer
Where do fax and portal plug in?	Step 1 reads images from the fax share and structured requests from the portal webhook. Both are read-only. The clock starts at the fax timestamp, not at keying.
Where does PACE plug in?	Case data is read from a PACE read replica. The copilot never writes to PACE. The reviewer records the decision in PACE as today.
Where does the human decide?	Step 6. The tool has four outcomes and none is a denial. A nurse confirms approvals. Only a physician signs an adverse determination. Intake staff review and send the fax-back.
What does the model do, and not do?	It reads the fax, plans which sections to read, and checks criteria against the record. It does not choose which policy version governs: code does that from the registry.
